WETLAND DELINEATION STUDY

HARVEY FIELD MASTER PLAN

1 EXECUTIVE SUMMARY

This report presents the findings of a wetland delineation study performed by The Watershed Company for Jviation, Inc. on behalf of the Harvey Field Airport. This effort is part of the environmental review process for the Harvey Field Master Plan, a document that will guide future development at Harvey Field Airport.

This wetland delineation study identifies wetlands present in the study area and evaluates regulatory implications. The study area can be seen on Figure 1. The following table lists the parcels reviewed under this delineation. In addition to examining the study area, an area outside the study area but on airport property was reviewed since wetlands are mapped in that location by the National Wetland Inventory (NWI). A total of three wetlands were identified; however, only one was delineated south of the airport since improvements to this area are the focus of the Master Plan. Snohomish County requires buffers to be applied to the delineated boundary of these features. Any proposed direct impacts to wetlands would require permitting from local, state, and federal agencies. Impacts to associated buffers of these features would also be regulated by Snohomish County.

Snohomish County Parcel Number	Size (acres)	Notes and limitations		
28051300401900	14.81	WSDOT parcel; NW airport corner reconnaissance only - not delineated		
28051300402000	23.00	WSDOT parcel; NW airport corner reconnaissance only - not delineated

2 PROJECT OVERVIEW

Harvey Field Airport is undergoing development of a new Master Plan. The document is required by the Federal Aviation Administration so that the airport may remain eligible for federal grant funds. The document will also provide guidance for future development over a 20-year period. One of the requisites for an airport master plan is an environmental inventory and review.

Harvey Field is located at 9900 Airport Way, Snohomish County (Figure 1). From Hwy 9, take the exit toward Snohomish. Turn east onto 2nd Street (0.2 mi), and then turn slightly right to turn onto 1st Street (0.4 mi). Turn right on Airport Way and continue for 0.2 miles.

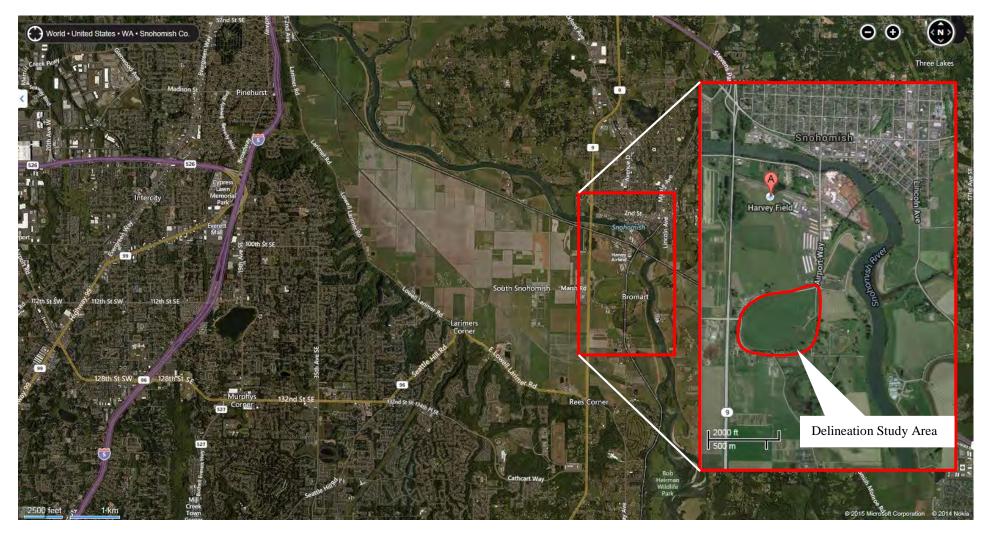

Figure 1. Vicinity Map, Harvey Field Airport. Bing Maps 2015 (background) and Google Maps 2015 (close-up).

3 METHODS

The study area was evaluated for wetlands using methodology from the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region Version 2.0* (Regional Supplement) (US Army Corps of Engineers [Corps] May 2010). The wetland boundaries were determined on the basis of an examination of vegetation, soils, and hydrology. Areas meeting the criteria set forth in the Regional Supplement were determined to be wetland. Soil, vegetation, and hydrologic parameters were sampled at several locations along the wetland boundary to make the determination. Data points on-site are marked with yellow- and black-striped flags. We recorded data at nine of these locations. Only Wetland A (see below) was delineated as part of this study.

Delineated, or otherwise verified wetlands, were classified using the *Western Washington Wetland Rating System 2014 Update* (Ecology, January 2015) (Rating System). Wetland A is marked with 378 pink- and black-striped flags.

All delineation flags were GPS-located using a hand-held Trimble Geo-XH unit. Following field location, the GPS data was differentially correcting using GPS Pathfinder Office Program and imported into AutoCAD for mapping.

4 FINDINGS

The Harvey Field Airport and the entire study area is located in the Snohomish Water Resource Inventory Area (WRIA 7) (Section 24, Township 28N, Range 5E). The delineation study area is located on the site of a large, actively-farmed hayfield south of Harvey Field on the south side of Airport Way and east/northeast of Springhetti Road. The interior of the study area is topographically higher than the perimeter, which is the location of a former oxbow (previously known as Hanson Slough) associated with the Snohomish River. One single-family residence, an associated garage, and a barn are located in the delineation study area.

Figure 2: NWI Map of Project Vicinity

4.1 Wetland A

According to NWI maps, the entirety of the former oxbow is identified as wetland. A large depressional wetland, Wetland A, is located across much of the former oxbow, although this delineation study documents the current extent of the wetland as being smaller than what is indicated on the NWI maps. Wetland A occupies much of the northern, western, and southern portions of the delineation study area. Vegetation in the wetland is mostly composed of an emergent Cowardin vegetation community dominated by soft rush, pasture grasses, creeping buttercup, and invasive reed canarygrass. The prevalence of soft rush, a facultative-wetland (FACW) species, within the wetland boundary transitions into a dominance of facultative (FAC) pasture grasses outside of the wetland boundary. A scrub-shrub fringe is present along the southern boundary of the wetland. The indicator soil in Wetland A is typically a high value (4), low chroma (1) loamy mineral soil with redoximorphic features (RMF) present. The soil observed in Wetland A satisfies the criteria for the hydric soil indicator Depleted Matrix (F3). The soil in areas outside of the wetland boundary are typically chroma (2) sandy loam/loamy sand with no RMF present. This soil

characteristic was occasionally observed in non-wetland areas that exhibited soil saturation or shallow ponding during flood events (see below).

4.2 Hydrology

Hydrology for Wetland A is provided by a variety of sources, including a seasonally high groundwater table, precipitation, and backwatering from the Snohomish River, which is tidally influenced at this location. Based on a review of historic aerial photographs, some degree of ditching has been present in Wetland A since at least 1933. Presently, a ditch is located through the entirety of Wetland A. While the ditch was presumably created to drain Wetland A as part of on-going agricultural activities at the site, it currently functions as an inlet and an outlet for floodwaters in the wetland. At a date uncertain, the original connection to the Snohomish River eliminated, and the drainage ditch was connected via an approximately 1,100-foot-long culvert to Batt Slough, which drains through a series of open channel segments and culverts to the Snohomish River. Historically, a one-way flap valve was located at the end of the lowermost Batt Slough culvert outlet, where it discharged into the Snohomish River. The valve prevented Snohomish River water from flowing into Batt Slough and the Wetland A drainage ditch (and, by association, Wetland A) during high tides and/or storm events. With the one-way valve properly functioning, much of Wetland A, specifically the northern portions, was effectively drained, eliminating wetland conditions. The lack of wetland hydrology in the northern portions of Wetland A was documented in a 2008 wetland delineation report, Wetland Assessment Report, Harvey Airfield Master Plan Update, Snohomish, Washington (Talasaea Consultants, Inc., March 2008) (Talasaea Report). The Talasaea Report recorded groundwater levels at 23 shallow groundwater monitoring wells throughout the drained portions of Wetland A. The results consistently supported the conclusion that these areas no longer exhibited soil saturation within the upper 12 inches of the soil during the growing season.

In 2009-2010, the one-way valve was replaced with a two-valve that can be electronically controlled to allow tidally-influenced water fluctuations and moderate flood events to backwater into Batt Slough, the Wetland A drainage ditch, and Wetland A. The valve is closed during severe flood events to protect properties and resources.

Since Wetland A is connected to Batt Slough via the drainage ditch/culvert, during periods of elevated river levels (i.e., winter/spring high tides and significant rain events), significant flooding is periodically present throughout Wetland A, and shallow flooding is occasionally present in non-wetland areas adjacent to Wetland A – areas that were observed as completely dry during high tide only days before a significant flood event. These water level fluctuations make the wetland functionally unsuitable to native amphibian breeding. The delineation of Wetland A was conducted over several days during January-February 2015, including during periods of normal precipitation (including high tide) and during periods when the Snohomish River was above flood stage. Given the highly fluctuating water levels in and around Wetland A, daily hydrology observations along portions of the wetland boundary were determined to be somewhat unreliable. Many areas in which shallow inundation is present during flood events do not exhibit soil saturation when river levels recede. Therefore, it was determined that these areas are not saturated for 14 consecutive days during the growing season in years of normal precipitation. The location of the jurisdictional wetland boundary was more accurately determined by examining soil and vegetation.

The entire length of the Wetland A drainage ditch was delineated as jurisdictional wetland. Ditches that were intentionally created from non-wetland areas are not regulated as wetlands under the Snohomish County Code (SCC). However, the drainage ditch currently satisfies wetland criteria and was excavated from an area of historic wetland and is, therefore, considered a wetland for regulatory purposes.

4.3 Habitat

The one-way valve was replaced with a fish-passable two-way valve, primarily, to improve water quality and fish habitat in Batt Slough. However, fish cannot access the Wetland A drainage ditch due to an impassible fish screen at the opening of the 1,100-foot-long culvert. Additionally, the water quality in Wetland A is likely too poor to support fish, particularly salmonid fish. Stormwater from SR-9 discharges directly into the drainage ditch, leaving an obvious petroleum sheen on the water surface. Additionally, the lack of canopy cover in the wetland may elevate water temperatures to ranges that are unfavorable to salmonid fish.

Figure 3: Wetland A on 12/29/14 during normal conditions at high tide (left). Wetland A on 1/8/2015 when Snohomish River was at flood stage (right).

Figure 4: Wetland A on 12/29/14 during normal conditions at high tide (left). Wetland A on 1/8/15 when Snohomish River was at flood stage (right).

4.4 Wetland B

Wetland B, which was not delineated as part of this study, is a depressional wetland located on the main airport property. Wetland B has an exclusivelyemergent Cowardin vegetation community dominated by a reed canarygrass monoculture. Hydrology for Wetland B is provided by a perched groundwater table and is supplemented by precipitation. Approximately one foot of ponding was present in Wetland B during the inspection. A drainage ditch connects the southwest corner of Wetland B to a larger drainage ditch that is located adjacent to SR-9. However, as evidenced by the degree of inundation observed during the inspection, the drainage ditch does not effectively drain the wetland.

Figure 5: Wetland B, facing east.

4.5 Wetland C

Wetland C, which was not delineated as part of this study, is a depressional wetland located near the northwest corner of the main airport property. Wetland C is depicted on NWI mapping, although the extent of the wetland is less than indicated on the NWI maps. Wetland C supports a forested Cowardin vegetation community dominated by black cottonwood, Douglas spirea, salmonberry, red-osier dogwood, Pacific willow, and reed canarygrass. Hydrology for Wetland C is provided by a high groundwater table and is likely supplemented by incidental stormwater runoff from the adjacent SR-9. More than one foot of inundation was present in much of Wetland C during the inspection.

Figure 6: Wetland C, facing west.

5 REGULATION

5.1 Local Regulations

Wetlands in Snohomish County are regulated under SCC 30.62A. Under SCC, wetlands are classified as one of four categories based on the Rating System. Snohomish County plans on updating its critical areas regulations, which currently utilize the 2004 Rating System, to adopt the 2014 Rating System. This change is expected to occur sometime in mid-2015. Therefore, the 2014 Rating System was used to classify wetlands.

According to the 2014 Rating System, Wetland A received seven points for water quality functions, six points for hydrologic functions, and four points for wildlife habitat functions, for a total of 17 points. This score qualifies Wetland A as a Category III wetland. Wetland B received six points for water quality functions, six points for hydrologic functions, and three points for wildlife habitat functions, for a total of 15 points. This score qualifies Wetland B as a Category IV wetland. Wetland C received seven points for water quality functions, seven points for hydrologic points, and three points for wildlife habitat functions, for a total of 17 points. This score qualifies Wetland C as a Category III wetland.

Wetland buffers in Snohomish County are determined based a combination of the wetland category and the intensity of the adjacent land use. The current land use in the delineation study area is moderate-intensity agriculture (hayfield) and low-density residential. These land uses do not meet the criteria for "high intensity" or "low intensity." Therefore, the standard buffer width for Category III wetlands applies to Wetland A. Similarly, Wetlands B and C, while located on the airport property, are more than 800 feet away from the airport operations and are located in a separate zoning area (A-10). Areas zoned for agriculture are not permitted for industrial land uses. Consequently, the "adjacent" land use does not meet the definition of "high intensity," resulting in the application of the standard buffer widths.

As mentioned, the Snohomish County critical areas regulations are currently being updated to reflect the revisions to the Rating System. The current regulations will likely no longer be in effect by the time local permits for the proposed project are applied for. Therefore, the 2014 Rating System, which may be implemented in Snohomish County as early as June 2015, is referenced in this document. The updated 2014 Rating System uses a different scoring system to classify wetlands than the previous 2004 Rating System. The effect that the 2014 Rating System will have on wetland buffer widths has not been finalized. The most recent draft regulations would require a standard buffer width of 110 feet for all Category III wetlands (i.e., Wetlands A and C). The draft regulations have not proposed buffer widths for Category IV wetlands. Therefore, we can only provide the current standard buffer width for Category IV wetlands, which is 40 feet [SCC 32.62A.320.1(a)]. Table 2 below summarizes the draft widths the County has proposed utilizing the 2014 Rating System.

Wetland	Category	Draft Standard Buffer Width			
Wetland A	III	110-ft			
Wetland B	IV	New widths currently undecided (current buffer width is 40-ft)			
Wetland C	III	110-ft			

Table 2: Draft Buffer Widths*

*Per Snohomish County Memorandum: *Critical Area Regulations Review and Update* 2/11/2015

Allowed Uses

There are certain structures or facilities permitted within wetlands and wetland buffers. These include utilities and transportation structures, provided there is

no feasible alternative or the alternative would result in unreasonable or disproportionate costs. In addition, the location and design of such structures must be designed so as to minimize impacts as much as feasible. Other activities allowed within wetlands and wetland buffers include stormwater detention/retention facilities, access and pedestrian walkways, vegetation trimming, and reconstruction or replacement of existing buildings provided the new building does not encroach further into the critical area or buffer than did the original building. A maximum one acre of wetland fill is allowed (SCC 30.62A.320(2) and 30.62A.340).

Under SCC 30.62A.340(4), direct wetland impacts to Category III wetlands, such as those associated with the potential relocation of Airport Way, require compensatory mitigation at an area ratio of 2:1 for wetland creation and 4:1 for wetland enhancement. In addition, the study area is located within the service area for both the Skykomish Habitat Mitigation Bank and the Snohomish Basin Mitigation Bank. Unavoidable wetland impacts can be mitigated by purchasing credits at the bank (SCC 30.62A.550).

6 STATE AND FEDERAL REGULATIONS

Wetlands are also regulated by the Corps under Section 404 of the Clean Water Act. Any filling of waters of the U.S., including wetlands (except isolated wetlands), would require notification and permits from the Corps. It is unlikely that any of the study area wetlands would be considered isolated. A formal isolated status inquiry can be requested from the Corps through the Jurisdictional Determination process. Federally permitted actions; actions that involve federal agencies, such as the Federal Aviation Administration; and/or actions that receive federal funding must document the potential effects of the project on threatened and endangered species through the preparation of a biological assessment study and consultation with the U.S. Fish and Wildlife Service and/or the National Marine Fisheries Service. Application for Corps permits may also require an individual 401 Water Quality Certification and Coastal Zone Management Consistency determination from Ecology and a Cultural Resource Study in accordance with Section 106 of the National Historic Preservation Act.

In general, neither the Corps nor Ecology regulates wetland buffers, unless direct impacts are proposed. When direct impacts are proposed, mitigated wetlands may be required to employ buffers based on Corps and Ecology joint regulatory guidance. The use of a mitigation bank is generally the preferred mitigation alternative for wetland impacts under the jurisdiction of the Corps and Ecology.

The information contained in this report is based on the application of technical guidelines currently accepted as the best available science. All discussions, conclusions and recommendations reflect the best professional judgment of the author(s) and are based upon information available to us at the time the study was conducted. All work was completed within the constraints of budget, scope, and timing. The findings of this report are subject to verification and agreement by the appropriate local, State and Federal regulatory authorities. No other warranty, expressed or implied, is made.

Wetland Rating Forms

THIS PAGE INTENTIONALLY LEFT BLANK

RATING SUMMARY – Western Washington

Name of wetland (or ID #): <u>Wetland A</u> Date of site visit: <u>2/10/2015</u> Rated by: <u>Nell Lund, Ryan Kahlo</u> Trained by Ecology? XY IN Date of training: <u>06/2014</u>

HGM Class used for rating: Depressional Wet

Wetland has multiple HGM classes? \Box Y \boxtimes N

NOTE: Form is not complete without the figures requested (figures can be combined). Source of base aerial photo/map: <u>SnoScape, Google Earth</u>

OVERALL WETLAND CATEGORY (based on functions \square or special characteristics \square)

1. Category of wetland based on FUNCTIONS

- **Category I** Total score = 23 27
- **Category II** Total score = 20 22
- Category III Total score = 16 19
- **Category IV** Total score = 9 15

FUNCTION		nprov ter Qu	•	H	ydrol	ogic		Habit	tat	
					Circle	the ap	oropr	iate r	atings	
Site Potential	Н	M	L	Н	M	L	Н	M) L	
Landscape Potential	Н	M	L	Ð	Μ	L	н	М	\bigcirc	
Value	Ð	Μ	L	Н	Μ	C	н	Μ	C	TOTAL
Score Based on Ratings		7			6			4		17

Score for each function based on three ratings (order of ratings ìs not important) 9 = H, H, H8 = H,H,M 7 = H,H,L 7 = H, M, M6 = H, M, L6 = M,M,M5 = H,L,L 5 = M, M, L4 = M, L, L

3 = L, L, L

2. Category based on SPECIAL CHARACTERISTICS of wetland

CHARACTERISTIC	CATEG	GORY	
Estuarine	Ι	II	
Wetland of High Conservation Value	Ι		
Bog	Ι		
Mature Forest	Ι		
Old Growth Forest	I		
Coastal Lagoon	Ι	II	
Interdunal	IIII	II IV	
None of the above	\geq	3	

Maps and figures required to answer questions correctly for Western Washington

Depressional Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	D 1.3, H 1.1, H 1.4	
Hydroperiods	D 1.4, H 1.2	
Location of outlet (can be added to map of hydroperiods)	D 1.1, D 4.1	
Boundary of area within 150 ft of the wetland (can be added to another figure)	D 2.2, D 5.2	
Map of the contributing basin	D 4.3, D 5.3	NA*
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	D 3.1, D 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	D 3.3	

*Figure not included. Contributing basin is all upstream portions of the Snohomish River watershed

HGM Classification of Wetlands in Western Washington

For questions 1-7, the criteria described must apply to the entire unit being rated.

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

 \boxtimes NO – go to 2

 \Box **YES** – the wetland class is **Tidal Fringe** – go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

NO - Saltwater Tidal Fringe (Estuarine) *If your wetland can be classified as a Freshwater Tidal Fringe use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe it is an* **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

 \boxtimes NO – go to 3 \square YES – The wetland class is Flats *If your wetland can be classified as a Flats wetland, use the form for Depressional wetlands.*

3. Does the entire wetland unit meet all of the following criteria?
□ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
□ At least 30% of the open water area is deeper than 6.6 ft (2 m).

 \boxtimes NO – go to 4

□**YES** – The wetland class is **Lake Fringe** (Lacustrine Fringe)

- 4. Does the entire wetland unit **meet all** of the following criteria?
 - □ The wetland is on a slope (*slope can be very gradual*),

□ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks,

□ The water leaves the wetland **without being impounded**.

⊠N0 – go to 5

□ **YES** – The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

- 5. Does the entire wetland unit **meet all** of the following criteria?
 - □ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

□ The overbank flooding occurs at least once every 2 years.

Wetland name or number: Wetland A – Harvey Field

NO − go to 6
YES − The wetland class is Riverine
NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

 \Box NO – go to 7

⊠ **YES** – The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

⊠N0 – go to 8

□ YES – The wetland class is Depressional

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream	Depressional
within boundary of depression	
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other	Treat as
class of freshwater wetland	ESTUARINE

If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.

DEPRESSIONAL AND FLATS WETLANDS	
Water Quality Functions - Indicators that the site functions to improve water quality	
D 1.0. Does the site have the potential to improve water quality?	_
D 1.1. <u>Characteristics of surface water outflows from the wetland</u> : Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).	
points = 3 Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet. points = 2 *Ditch functions as both an inlet and an outlet, therefore is only an intermittently flowing outlet. Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing points = 1 Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch. points = 1	2
D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions). Yes = 4 No = 0	0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes): Wetland has persistent, ungrazed, plants > 95% of area Wetland has persistent, ungrazed, plants > 1/2 of area Wetland has persistent, ungrazed plants > 1/2 of area Points = 3 Wetland has persistent, ungrazed plants > 1/10 of area Points = 1 Wetland has persistent, ungrazed plants < 1/10 of area	1
D 1.4. Characteristics of seasonal ponding or inundation: This is the area that is ponded for at least 2 months. See description in manual. Area seasonally ponded is > ½ total area of wetland points = 4 Area seasonally ponded is > ¼ total area of wetland points = 2 Area seasonally ponded is < ¼ total area of wetland	4
Total for D 1 Add the points in the boxes above	7
Rating of Site PotentialIf score is: \Box 12-16 = H \boxtimes 6-11 = M \Box 0-5 = LRecord the rating on the fill	irst page
D 2.0. Does the landscape have the potential to support the water quality function of the site?	
D 2.1. Does the wetland unit receive stormwater discharges? Yes = 1 No = 0	1
D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants? Yes = 1 No = 0	1
D 2.3. Are there septic systems within 250 ft of the wetland? Yes = 1 No = 0	0
D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1-D 2.3? SourceYes = 1 No = 0	0
Total for D 2Add the points in the boxes above	2
Rating of Landscape Potential If score is: \Box 3 or 4 = H \boxtimes 1 or 2 = M \Box 0 = L <i>Record the rating on the first</i>	st page
D 3.0. Is the water quality improvement provided by the site valuable to society?	
D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list? Yes = 1 No = 0	1
D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list? Yes = 1 No = 0	1

 D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list?
 Yes = 1
 No = 0
 1

 D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality (answer YES if there is a TMDL for the basin in which the unit is found)?
 Yes = 2
 No = 0

These questions apply to wetlands of all HGM classes.	
HABITAT FUNCTIONS - Indicators that site functions to provide important habitat	
H 1.0. Does the site have the potential to provide habitat?	
H 1.1. Structure of plant community: Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked. □ Aquatic bed 4 structures or more: points = 4 ⊠ Emergent 3 structures: points = 2 ⊠ Scrub-shrub (areas where shrubs have > 30% cover) 2 structures: points = 1 □ Forested (areas where trees have > 30% cover) 1 structure: points = 0 If the unit has a Forested class, check if: □ □ The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon	1
H 1.2. Hydroperiods Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (see text for descriptions of hydroperiods). Image: Permanently flooded or inundated (ditch) 4 or more types present: points = 3 Image: Permanently flooded or inundated (ditch) 4 or more types present: points = 3 Image: Permanently flooded or inundated 3 types present: points = 2 Image: Permanently flooded or inundated 2 types present: points = 1 Image: Permanently flooded or inundated 2 types present: points = 1 Image: Permanently flowing stream or river in, or adjacent to, the wetland 1 type present: points = 0 Image: Permanently flowing stream in, or adjacent to, the wetland 2 points Image: Permanently flowing stream in, or adjacent to, the wetland 2 points Image: Permanently flowing stream in, or adjacent to, the wetland 2 points	2
H 1.3. Richness of plant species Count the number of plant species in the wetland that cover at least 10 ft ² . Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle If you counted: > 19 species points = 2 5 - 19 species : JUEF, grasses, SPDO, COSE, THPL, POBA, SASI, RUSP points = 1 < 5 species points = 0	1
H 1.4. Interspersion of habitats Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. <i>If you</i> <i>have four or more plant classes or three classes and open water, the rating is always high.</i> None = 0 points All three diagrams in this row are HIGH = 3points	2

H 1.5. Special habitat features:	
Check the habitat features that are present in the wetland. The number of checks is the number of points.	
☑ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long).	
\Box Standing snags (dbh > 4 in) within the wetland	
Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)	
Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (cut shrubs or trees that have not yet weathered where wood is exposed)	2
At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (structures for egg-laying by amphibians)	
Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)	
Total for H 1Add the points in the boxes above	8
Rating of Site Potential If score is: \Box 15-18 = H \boxtimes 7-14 = M \Box 0-6 = LRecord the rating on a	the first page
H 2.0. Does the landscape have the potential to support the habitat functions of the site?	
H 2.1. Accessible habitat (include only habitat that directly abuts wetland unit). Calculate: $\%$ undisturbed habitat: $0 + [(\% \text{ moderate and low intensity land uses})/2]: 0 = 0\%. If total accessible$	

<i>Calculate:</i> % undisturbed habitat: 0 + [(% moderate and low intensity land uses)/2]: 0 = 0% If to be bised in	tal accessible	
habitat is: > 1/3 (33.3%) of 1 km Polygon	points = 3	0
20-33% of 1 km Polygon	points = 2	
10-19% of 1 km Polygon	points = 1	
< 10% of 1 km Polygon	points = 0	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.		
<i>Calculate:</i> % undisturbed habitat: 6 + [(% moderate and low intensity land uses)0/2]: 0 = 6%		
Undisturbed habitat > 50% of Polygon	points = 3	0
Undisturbed habitat 10-50% and in 1-3 patches	points = 2	U
Undisturbed habitat 10-50% and > 3 patches	points = 1	
Undisturbed habitat < 10% of 1 km Polygon	points = 0	
H 2.3. Land use intensity in 1 km Polygon: If		
> 50% of 1 km Polygon is high intensity land use	points = (- 2)	-2
≤ 50% of 1 km Polygon is high intensity	points = 0	
Total for H 2 Add the points in the	ne boxes above	-2

Rating of Landscape Potential If score is: \Box **4-6 = H** \Box **1-3 = M** \boxtimes **< 1 = L**

Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?	
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score	
that applies to the wetland being rated.	
Site meets ANY of the following criteria: points = 2	
It has 3 or more priority habitats within 100 m (see next page)	
It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)	
It is mapped as a location for an individual WDFW priority species	0
It is a Wetland of High Conservation Value as determined by the Department of Natural Resources	
It has been categorized as an important habitat site in a local or regional comprehensive plan,	
in a Shoreline Master Plan, or in a watershed plan	
Site has 1 or 2 priority habitats (listed on next page) within 100 m points = 1	
Site does not meet any of the criteria above points = 0	

Rating of Value If score is: $\Box 2 = H \Box 1 = M \boxtimes 0 = L$

WDFW Priority Habitats

<u>Priority habitats listed by WDFW</u> (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp. <u>http://wdfw.wa.gov/publications/00165/wdfw00165.pdf</u> or access the list from here: <u>http://wdfw.wa.gov/conservation/phs/list/</u>)

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** This question is independent of the land use between the wetland unit and the priority habitat.

□ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).

□ **Biodiversity Areas and Corridors**: Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).

□ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.

 \Box **Old-growth/Mature forests:** <u>Old-growth west of Cascade crest</u> – Stands of at least 2 tree species, forming a multi- layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. <u>Mature forests</u> – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.

□ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).

□ **Riparian**: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.

□ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).

□ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.

□ **Nearshore**: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).

□ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.

□ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.

□ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.

 \Box Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category			
Check off any criteria that apply to the wetland. Circle the category when the appropriate criteria are met.				
SC 1.0. Estuarine wetlands				
Does the wetland meet the following criteria for Estuarine wetlands?				
\Box The dominant water regime is tidal,				
Vegetated, and				
□ With a salinity greater than 0.5 ppt □ Yes –Go to SC 1.1 ⊠ No= Not an estuarine wetland				
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? Yes = Category I □No - Go to SC 1.2	Cat. I			
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions?				
\Box The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has	Cat. I			
less than 10% cover of non-native plant species. (If non-native species are Spartina, see page 25)				
\Box At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or	C-+ 11			
un- mowed grassland.	Cat. II			
□ The wetland has at least two of the following features: tidal channels, depressions with open water,				
or contiguous freshwater wetlands.				
SC 2.0. Wetlands of High Conservation Value (WHCV)				
SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High				
Conservation Value? \Box Yes – Go to SC 2.2 \boxtimes No – Go to SC 2.3				
SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value?				
Yes = Category I No = Not a WHCV	Cat. I			
SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf				
$\Box Yes - Contact WNHP/WDNR and go to SC 2.4 \Box No = Not a WHCV$				
SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on				
their website?				
SC 3.0. Bogs				
Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? Use the key				
below. If you answer YES you will still need to rate the wetland based on its functions.				
SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or				
more of the first 32 in of the soil profile? \Box Yes – Go to SC 3.3 \boxtimes No – Go to SC 3.2				
SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep				
over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or				
pond? \Box Yes – Go to SC 3.3 \Box No = Is not a bog	Cat. I			
SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30%	Cal. I			
cover of plant species listed in Table 4? NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by				
measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the				
plant species in Table 4 are present, the wetland is a bog.				
SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar,				
western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the				
species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy?				
□Yes = Is a Category I bog □No = Is not a bog				

SC 4.0. Forested Wetlands	
 Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. Mature forests (west of the Cascade Crest): Stands where the largest trees are 80- 200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). 	
□Yes = Category I ⊠No = Not a forested wetland for this section	
SC 5.0. Wetlands in Coastal Lagoons Does the wetland meet all of the following criteria of a wetland in a coastal lagoon? □ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks □ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (needs to be measured near the bottom) □ Yes – Go to SC 5.1 □ The wetland meet all of the following three conditions? □ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100). □ At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un- mowed grassland.	Cat. I Cat. II
The wetland is larger than $1/_{10}$ ac (4350 ft ²) Yes = Category I No = Category I	
SC 6.0. Interdunal Wetlands	
Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If</i> <i>you answer yes you will still need to rate the wetland based on its habitat functions.</i> In practical terms that means the following geographic areas: Long Beach Peninsula: Lands west of SR 103 Grayland-Westport: Lands west of SR 105	Cat I
□ Ocean Shores-Copalis: Lands west of SR 115 and SR 109 □ Yes – Go to SC 6.1 \square No = not an interdunal wetland for rating	Cat. II
SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)? Yes = Category I □No – Go to SC 6.2	Cat. III
SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger? Yes = Category II □No – Go to SC 6.3 SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac? Yes = Category III □No = Category IV	Cat. IV
Category of wetland based on Special Characteristics If you answered No for all types, enter "Not Applicable" on Summary Form	N/A

HGM Classification of Wetlands in Western Washington

For questions 1-7, the criteria described must apply to the entire unit being rated.

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

 \boxtimes NO – go to 2

- **YES** the wetland class is **Tidal Fringe** go to 1.1
- 1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

NO – Saltwater Tidal Fringe (Estuarine) If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands. If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

YES – The wetland class is **Flats** \boxtimes NO – go to 3 If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet all** of the following criteria? The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size; \Box At least 30% of the open water area is deeper than 6.6 ft (2 m).

 \boxtimes NO – go to 4 **YES** – The wetland class is **Lake Fringe** (Lacustrine Fringe)

- 4. Does the entire wetland unit **meet all** of the following criteria?
 - The wetland is on a slope (*slope can be very gradual*),

The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks,

The water leaves the wetland **without being impounded**.

 \boxtimes NO – go to 5

YES – The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

- 5. Does the entire wetland unit **meet all** of the following criteria?
 - The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.

The overbank flooding occurs at least once every 2 years.

YES – Freshwater Tidal Fringe

Wetland name or number: B

⊠NO – go to 6 □**YES** – The wetland class is **Riverine NOTE**: The Riverine unit can contain depressions that are filled with water when the river is not flooding

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

 \boxtimes NO – go to 7

□ **YES** – The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

 \Box NO – go to 8

□ YES – The wetland class is Depressional

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream	Depressional
within boundary of depression	
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other	Treat as
class of freshwater wetland	ESTUARINE

If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.

DEPRESSIONAL AND FLATS WETLANDS	
Water Quality Functions - Indicators that the site functions to improve water quality	
D 1.0. Does the site have the potential to improve water quality?	
D 1.1. Characteristics of surface water outflows from the wetland:	
Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet). points = 3 <u>Wetland has an intermittently flowing stream or ditch,</u> OR highly constricted permanently flowing outlet. points = 2	2
Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing points = 1 Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch. points = 1	
D 1.2. <u>The soil 2 in below the surface (or duff layer)</u> is true clay or true organic (use NRCS definitions). Yes = 4 No = 0	0
D 1.3. <u>Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes)</u> : Wetland has persistent, ungrazed, plants > 95% of area points = 5	
Wetland has persistent, ungrazed, plants > 1/2 of areapoints = 3Wetland has persistent, ungrazed plants > 1/10 of areapoints = 1	0
Wetland has persistent, ungrazed plants < 1/10 of area points = 0 _*Mowed	
D 1.4. Characteristics of seasonal ponding or inundation: This is the area that is ponded for at least 2 months. See description in manual. Area seasonally ponded is > ½ total area of wetland points = 4 Area seasonally ponded is > ¼ total area of wetland points = 2 Area seasonally ponded is < ¼ total area of wetland	4
Total for D 1 Add the points in the boxes above	6
Rating of Site PotentialIf score is: \Box 12-16 = H \boxtimes 6-11 = M \Box 0-5 = LRecord the rating on the first page	
D 2.0. Does the landscape have the potential to support the water quality function of the site?	
D 2.1. Does the wetland unit receive stormwater discharges? Yes = 1 No = 0	0
D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?	0
D 2.3. Are there septic systems within 250 ft of the wetland? Yes = 1 No = 0	0
D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1-D 2.3? SourceYes = 1 No = 0	0
Total for D 2 Add the points in the boxes above	0
Rating of Landscape Potential If score is: \Box 3 or 4 = H \Box 1 or 2 = M \boxtimes 0 = L <i>Record the rating on the first</i>	st page
D 3.0. Is the water quality improvement provided by the site valuable to society?	
D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list? Yes = 1 No = 0	0
D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list? Yes = 1 No = 0	1
D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality (<i>answer YES if there is a TMDL for the basin in which the unit is found</i>)? Yes = 2 No = 0	2
Total for D 3 Add the points in the boxes above	3
Rating of Value If score is: $\square 2-4 = H \square 1 = M \square 0 = L$ Record the rating on the first page	

DEPRESSIONAL AND FLATS WET Hydrologic Functions - Indicators that the site functions to reduc		on
D 4.0. Does the site have the potential to reduce flooding and erosion?		
D 4.1. <u>Characteristics of surface water outflows from the wetland</u> : Wetland is a depression or flat depression with no surface water leaving it (no <u>Wetland has an intermittently flowing stream or ditch</u> , OR highly constricted Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanen Wetland has an unconstricted, or slightly constricted, surface outlet that is per	permanently flowing outletpoints = 2 tly flowing ditch points = 1	2
 D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the with no outlet, measure from the surface of permanent water or if dry, the deep Marks of ponding are 3 ft or more above the surface or bottom of outlet Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet The wetland is a "headwater" wetland Wetland is flat but has small depressions on the surface that trap water Marks of ponding less than 0.5 ft (6 in) 	-	3
D 4.3. <u>Contribution of the wetland to storage in the watershed</u> : <i>Estimate the ratio of</i> <i>contributing surface water to the wetland to the area of the wetland unit itself</i> The area of the basin is less than 10 times the area of the unit The area of the basin is 10 to 100 times the area of the unit The area of the basin is more than 100 times the area of the unit Entire wetland is in the Flats class	points = 5 points = 3 points = 0 points = 5	3

D 6.0. Are the hydrologic functions provided by the site valuable to society?		
 D 6.1. <u>The unit is in a landscape that has flooding problems</u>. Choose the description t the wetland unit being rated. Do not add points. <u>Choose the highest score if m</u> The wetland captures surface water that would otherwise flow down-gradient damaged human or natural resources (e.g., houses or salmon redds): Flooding occurs in a sub-basin that is immediately down-gradient of unit. <u>Surface flooding problems are in a sub-basin farther down-gradient</u>. Flooding from groundwater is an issue in the sub-basin. The existing or potential outflow from the wetland is so constrained by human 	ore than one condition is met. into areas where flooding has points = 2 points = 1 points = 1	1
water stored by the wetland cannot reach areas that flood. <i>Explain why</i>	points = 0	
There are no problems with flooding downstream of the wetland. D 6.2. Has the site been identified as important for flood storage or flood conveyance		0
Total for D 6 Ac	Yes = 2 No = 0	1
Rating of Value If score is: $\Box 2-4 = H \boxtimes 1 = M \Box 0 = I$	dd the points in the boxes above	1

Rating of Value If score is: $\Box 2-4 = H \boxtimes 1 = M \Box 0 = L$

These questions apply to wetlands of all HGM classes.	
HABITAT FUNCTIONS - Indicators that site functions to provide important habitat	
H 1.0. Does the site have the potential to provide habitat?	
H 1.1. Structure of plant community: Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked. □ Aquatic bed 4 structures or more: points = 4 ⊠ Emergent 3 structures: points = 2 □ Scrub-shrub (areas where shrubs have > 30% cover) 2 structures: points = 1 □ Forested (areas where trees have > 30% cover) 1 structure: points = 0 If the unit has a Forested class, check if: □ □ The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon	0
H 1.2. Hydroperiods Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (see text for descriptions of hydroperiods). Permanently flooded or inundated 4 or more types present: points = 3 Seasonally flooded or inundated 3 types present: points = 2 Occasionally flooded or inundated 2 types present: points = 1 Saturated only 1 type present: points = 0 Permanently flowing stream or river in, or adjacent to, the wetland 2 points Lake Fringe wetland 2 points Freshwater tidal wetland 2 points	0
H 1.3. Richness of plant species Count the number of plant species in the wetland that cover at least 10 ft ² . Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle If you counted: > 19 species points = 2 5 - 19 species points = 1 < 5 species	0
H 1.4. Interspersion of habitats Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. <i>If you</i> <i>have four or more plant classes or three classes and open water, the rating is always high.</i> None = 0 points All three diagrams in this row are HIGH = 3points	0

Wetland Rating System for Western WA: 2014 Update Rating Form – Effective January 1, 2015

Wetland name or number: B

H 1.5. Special habitat features:	
Check the habitat features that are present in the wetland. The number of checks is the number of points.	
□ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long).	
Standing snags (dbh > 4 in) within the wetland	
Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)	
Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (cut shrubs or trees that have not yet weathered where wood is exposed)	0
At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (structures for egg-laying by amphibians)	
Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)	
Total for H 1Add the points in the boxes above	0

Rating of Site Potential If score is: \Box **15-18 = H** \Box **7-14 = M** \boxtimes **0-6 = L**

Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat functions of the	he site?	
H 2.1. Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> % undisturbed habitat: 0 + [(% moderate and low intensity land uses)0%/ habitat is: > 1/3 (33.3%) of 1 km Polygon	2]: 0% If total accessible points = 3	0
20-33% of 1 km Polygon 10-19% of 1 km Polygon < 10% of 1 km Polygon	points = 3 points = 2 points = 1 points = 0	0
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> % undisturbed habitat: 5 + [(% moderate and low intensity land uses)0/2] Undisturbed habitat > 50% of Polygon Undisturbed habitat 10-50% and in 1-3 patches Undisturbed habitat 10-50% and > 3 patches Undisturbed habitat < 10% of 1 km Polygon	: 0 = 5% points = 3 points = 2 points = 1 points = 0	0
H 2.3. Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use ≤ 50% of 1 km Polygon is high intensity	points = (- 2) points = 0	-2
Total for H 2 Add the	e points in the boxes above	-2

Rating of Landscape Potential If score is: \Box **4-6 = H** \Box **1-3 = M** \boxtimes **< 1 = L**

Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest sco	re	
that applies to the wetland being rated.		
Site meets ANY of the following criteria: points	= 2	
\Box It has 3 or more priority habitats within 100 m (see next page)		
\square It provides habitat for Threatened or Endangered species (any plant or animal on the state or federa	il lists)	
It is mapped as a location for an individual WDFW priority species	0	
\Box It is a Wetland of High Conservation Value as determined by the Department of Natural Resources		
□ It has been categorized as an important habitat site in a local or regional comprehensive plan,		
in a Shoreline Master Plan, or in a watershed plan		
Site has 1 or 2 priority habitats (listed on next page) within 100 m points	= 1	
Site does not meet any of the criteria above points	= 0	
Rating of Value If score is: $\Box 2 = H$ $\Box 1 = M$ $\boxtimes 0 = L$ Record the rate	ing on the first page	

Wetland Rating System for Western WA: 2014 Update Rating Form – Effective January 1, 2015

WDFW Priority Habitats

<u>Priority habitats listed by WDFW</u> (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp. <u>http://wdfw.wa.gov/publications/00165/wdfw00165.pdf</u> or access the list from here: <u>http://wdfw.wa.gov/conservation/phs/list/</u>)

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** This question is independent of the land use between the wetland unit and the priority habitat.

□ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).

□ **Biodiversity Areas and Corridors**: Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).

□ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.

 \Box **Old-growth/Mature forests:** <u>Old-growth west of Cascade crest</u> – Stands of at least 2 tree species, forming a multi- layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. <u>Mature forests</u> – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.

□ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).

□ **Riparian**: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.

□ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).

□ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.

□ **Nearshore**: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).

□ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.

□ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.

□ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.

 \Box Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
Check off any criteria that apply to the wetland. Circle the category when the appropriate criteria are met.	
SC 1.0. Estuarine wetlands Does the wetland meet the following criteria for Estuarine wetlands? The dominant water regime is tidal, Vegetated, and	
□ With a salinity greater than 0.5 ppt □ Yes −Go to SC 1.1 □ No= Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? Yes = Category I □No - Go to SC 1.2	Cat. I
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i>, see page 25) 	Cat. I
At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un- mowed grassland.	Cat. II
 □ The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. □ Yes = Category I □ No= Category II 	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website?	Cat. I
 SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? Use the key below. If you answer YES you will still need to rate the wetland based on its functions. SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? Yes – Go to SC 3.3 □No – Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? □Yes = Is a Category I bog □No = Is not a bog 	Cat. I

SC 4.0. Forested Wetlands	
 Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. Mature forests (west of the Cascade Crest): Stands where the largest trees are 80- 200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). 	Cat. I
□Yes = Category I □No = Not a forested wetland for this section	
SC 5.0. Wetlands in Coastal Lagoons	
Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?	
□ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated	
from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks	
 The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon <i>(needs to be measured near the</i> 	Cat. I
bottom)	Cat. I
\Box Yes – Go to SC 5.1 \Box No = Not a wetland in a coastal lagoon	
SC 5.1. Does the wetland meet all of the following three conditions?	
\square The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has	Cat. II
less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).	
□ At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or	
un- mowed grassland. \Box The wetland is larger than $^{1}/_{10}$ ac (4350 ft ²)	
$\Box \text{ Yes} = \text{Category I} \Box \text{No} = \text{Category I}$	
SC 6.0. Interdunal Wetlands	
Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? If you answer yes you will still need to rate the wetland based on its habitat functions.	
In practical terms that means the following geographic areas:	Cat I
□ Long Beach Peninsula: Lands west of SR 103	
□ Grayland-Westport: Lands west of SR 105	
Ocean Shores-Copalis: Lands west of SR 115 and SR 109	Cot II
\Box Yes – Go to SC 6.1 \Box No = not an interdunal wetland for rating	Cat. II
SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M	Cat. III
for the three aspects of function)? \Box Yes = Category I \Box No – Go to SC 6.2	
SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger? Yes = Category II	
SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?	Cat. IV
$\Box Yes = Category III \Box No = Category IV$	
Category of wetland based on Special Characteristics	Click here to
If you answered No for all types, enter "Not Applicable" on Summary Form	enter text.

RATING SUMMARY – Western Washington

Name of wetland (or ID #): <u>Wetland C</u> Date of site visit: <u>1/27/2015</u> Rated by: <u>Kahlo, R; Lund, N</u> Trained by Ecology? XY IN Date of training: <u>09/2014</u>

HGM Class used for rating: Depressional Wetland has multiple HGM classes?
UY
N

NOTE: Form is not complete without the figures requested (figures can be combined). Source of base aerial photo/map: <u>Google Maps</u>

OVERALL WETLAND CATEGORY (based on functions \square or special characteristics \square)

1. Category of wetland based on FUNCTIONS

- **Category I** Total score = 23 27
- **Category II** Total score = 20 22
- Category III Total score = 16 19
- **Category IV** Total score = 9 15

FUNCTION		nprov ter Q	•	H	ydrolo	ogic		Habita	ət	
					Circle t	the app	oropr	iate ra	tings	
Site Potential	Н	M	L	Н	M	L	Н	Μ	L	
Landscape Potential	Н	Μ	L	H	Μ	L	Н	Μ	L	
Value	H	Μ	L	Н	M	L	Н	Μ	L	TOTAL
Score Based on Ratings		7			7			3		17

Score for each function based on three ratings (order of ratings is not important) 9 = H,H,H 8 = H,H,M 7 = H,H,L 7 = H,M,M 6 = H,M,L

6 = M,M,M 5 = H,L,L 5 = M,M,L 4 = M,L,L

3 = L, L, L

2. Category based on SPECIAL CHARACTERISTICS of wetland

CHARACTERISTIC	CATEGORY	
Estuarine	I II	
Wetland of High Conservation Value	I	
Bog	I	
Mature Forest	I	
Old Growth Forest		I
Coastal Lagoon	Ι	II
Interdunal	I II	III IV
None of the above		

Maps and figures required to answer questions correctly for Western Washington

Depressional Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	D 1.3, H 1.1, H 1.4	1
Hydroperiods	D 1.4, H 1.2	2
Location of outlet (can be added to map of hydroperiods)	D 1.1, D 4.1	2
Boundary of area within 150 ft of the wetland (can be added to another figure)	D 2.2, D 5.2	2
Map of the contributing basin	D 4.3, D 5.3	3
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	4
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	D 3.1, D 3.2	5
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	D 3.3	6

Riverine Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Ponded depressions	R 1.1	
Boundary of area within 150 ft of the wetland (can be added to another figure)	R 2.4	
Plant cover of trees, shrubs, and herbaceous plants	R 1.2, R 4.2	
Width of unit vs. width of stream (can be added to another figure)	R 4.1	
Map of the contributing basin	R 2.2, R 2.3, R 5.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including	H 2.1, H 2.2, H 2.3	
polygons for accessible habitat and undisturbed habitat		
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	R 3.1	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	R 3.2, R 3.3	

Lake Fringe Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	L 1.1, L 4.1, H 1.1, H 1.4	
Plant cover of trees, shrubs, and herbaceous plants	L 1.2	
Boundary of area within 150 ft of the wetland (can be added to another figure)	L 2.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	L 3.1, L 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	L 3.3	

Slope Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Plant cover of dense trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of dense, rigid trees, shrubs, and herbaceous plants	S 4.1	
(can be added to figure above)		
Boundary of 150 ft buffer (can be added to another figure)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	S 3.1, S 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetlands in Western Washington

For questions 1-7, the criteria described must apply to the entire unit being rated.

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

 \boxtimes NO – go to 2

- **YES** the wetland class is **Tidal Fringe** go to 1.1
- 1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

NO – Saltwater Tidal Fringe (Estuarine) If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands. If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

YES – The wetland class is **Flats** \boxtimes NO – go to 3 If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet all** of the following criteria? The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size; \Box At least 30% of the open water area is deeper than 6.6 ft (2 m).

 \boxtimes NO – go to 4 **YES** – The wetland class is **Lake Fringe** (Lacustrine Fringe)

- 4. Does the entire wetland unit **meet all** of the following criteria?
 - The wetland is on a slope (*slope can be very gradual*),

The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks,

The water leaves the wetland **without being impounded**.

 \boxtimes NO – go to 5

YES – The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

- 5. Does the entire wetland unit **meet all** of the following criteria?
 - The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.

The overbank flooding occurs at least once every 2 years.

YES – Freshwater Tidal Fringe

Wetland name or number: C

NO - go to 6
□YES - The wetland class is Riverine NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

 \boxtimes NO – go to 7

□ **YES** – The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

 \Box NO – go to 8

□ YES – The wetland class is Depressional

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream	Depressional
within boundary of depression	
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other	Treat as
class of freshwater wetland	ESTUARINE

If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.

DEPRESSIONAL AND FLATS WETLANDS Water Quality Functions - Indicators that the site functions to improve water quality	
D 1.0. Does the site have the potential to improve water quality?	
D 1.1. <u>Characteristics of surface water outflows from the wetland</u> : Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet). points = 3 <u>Wetland has an intermittently flowing stream or ditch</u> , <u>OR highly constricted permanently flowing outlet</u> . <u>points</u> = 2 Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing points = 1 Wetland is a flat depression (QUESTION 7 on key) where outlet that is permanently flowing points = 1	2
Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch. points = 1 D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (<i>use NRCS definitions</i>). Yes = 4 No = 0	0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes): Wetland has persistent, ungrazed, plants > 95% of area Wetland has persistent, ungrazed, plants > 1/2 of area Wetland has persistent, ungrazed plants > 1/2 of area Wetland has persistent, ungrazed plants > 1/10 of area Wetland has persistent, ungrazed plants < 1/10 of area	5
D 1.4. Characteristics of seasonal ponding or inundation: This is the area that is ponded for at least 2 months. See description in manual. Area seasonally ponded is > ½ total area of wetland Area seasonally ponded is > ½ total area of wetland points = 4 Area seasonally ponded is > ¼ total area of wetland Area seasonally ponded is < ¼ total area of wetland	2
Total for D 1Add the points in the boxes above	9
Rating of Site PotentialIf score is: \Box 12-16 = H \boxtimes 6-11 = M \Box 0-5 = LRecord the rating on the fitD 2.0. Does the landscape have the potential to support the water quality function of the site?	rst page
D 2.1. Does the wetland unit receive stormwater discharges? Yes = 1 No = 0	1
D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants? *Mowing	1
D 2.3. Are there septic systems within 250 ft of the wetland? Yes = 1 No = 0	0
D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1-D 2.3? SourceYes = 1 No = 0	0
Total for D 2Add the points in the boxes above	2
Rating of Landscape Potential If score is: \Box 3 or 4 = H \boxtimes 1 or 2 = M \Box 0 = L <i>Record the rating on the firs</i>	t page
D 3.0. Is the water quality improvement provided by the site valuable to society?	
D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list? Yes = 1 No = 0	0
D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list? Yes = 1 No = 0	1
D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality (<i>answer YES if there is a TMDL for the basin in which the unit is found</i>)? Yes = 2 No = 0	2
Total for D 3Add the points in the boxes above	3

Rating of Site PotentialIf score is: \Box 12-16 = H \boxtimes 6-11 = M \Box 0-5 = LRecord the rating on the	first page
D 5.0. Does the landscape have the potential to support hydrologic functions of the site?	
D 5.1. Does the wetland receive stormwater discharges? Yes = 1 No = 0	1
D 5.2. Is >10% of the area within 150 ft of the wetland in land uses that generate excess runoff? Yes = 1 No = 0	1
D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)? Yes = 1 No = 0	1
Total for D 5Add the points in the boxes above	3
Rating of Landscape Potential If score is: $\square 3 = H$ $\square 1 \text{ or } 2 = M$ $\square 0 = L$ Record the rating on the	first page
D 6.0. Are the hydrologic functions provided by the site valuable to society?	
 D 6.1. <u>The unit is in a landscape that has flooding problems</u>. <i>Choose the description that best matches conditions around the wetland unit being rated. Do not add points. <u>Choose the highest score if more than one condition is met.</u> The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): Flooding occurs in a sub-basin that is immediately down-gradient of unit. points = 2 <u>Surface flooding problems are in a sub-basin farther down-gradient.</u> points = 1 Flooding from groundwater is an issue in the sub-basin. points = 1 The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. <i>Explain why</i> points = 0 There are no problems with flooding downstream of the wetland. </i> 	1
D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0	0
Total for D 6Add the points in the boxes above	1
Rating of Value If score is: $\Box 2-4 = H \boxtimes 1 = M \Box 0 = L$ Record the rating on the	first page

Rating of Value If score is: $\Box 2-4 = H \boxtimes 1 = M \Box 0 = L$

These questions apply to wetlands of all HGM classes.	
HABITAT FUNCTIONS - Indicators that site functions to provide important habitat	
H 1.0. Does the site have the potential to provide habitat?	
 H 1.1. Structure of plant community: Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked. □ Aquatic bed □ Emergent □ Scrub-shrub (areas where shrubs have > 30% cover) □ Structures: points = 1 □ Forested (areas where trees have > 30% cover) □ I structure: points = 0 □ If the unit has a Forested class, check if: □ The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon 	1
H 1.2. Hydroperiods Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (see text for descriptions of hydroperiods). Permanently flooded or inundated 4 or more types present: points = 3 Seasonally flooded or inundated 3 types present: points = 2 Occasionally flooded or inundated 2 types present: points = 1 Saturated only 1 type present: points = 0 Permanently flowing stream or river in, or adjacent to, the wetland 2 points Seasonally flowing stream in, or adjacent to, the wetland 2 points	1
H 1.3. Richness of plant species Count the number of plant species in the wetland that cover at least 10 ft ² . Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle If you counted: > 19 species points = 2 5 - 19 species points = 1 < 5 species	1
H 1.4. Interspersion of habitats Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. <i>If you</i> <i>have four or more plant classes or three classes and open water, the rating is always high.</i> None = 0 points All three diagrams in this row are HIGH = 3points	0

Wetland name or number: C

H 1.5. Special habitat features:	
Check the habitat features that are present in the wetland. The number of checks is the number of points.	
☑ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long).	
☑ Standing snags (dbh > 4 in) within the wetland	
Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)	
Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (cut shrubs or trees that have not yet weathered where wood is exposed)	2
At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (structures for egg-laying by amphibians)	
Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)	
Total for H 1Add the points in the boxes above	2

Rating of Site Potential If score is: \Box **15-18 = H** \Box **7-14 = M** \boxtimes **0-6 = L**

Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat fur	nctions of the site?	
H 2.1. Accessible habitat (include <i>only habitat that directly abuts wetland unit Calculate:</i> % undisturbed habitat: 0 + [(% moderate and low intensity la habitat is:		
> 1/3 (33.3%) of 1 km Polygon	points = 3	0
20-33% of 1 km Polygon	points = 2	
10-19% of 1 km Polygon	points = 1	
< 10% of 1 km Polygon	points = 0	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.		
Calculate: % undisturbed habitat: 2 + [(% moderate and low intensity la	nd uses)0/2]: 0 = 2%	
Undisturbed habitat > 50% of Polygon	points = 3	0
Undisturbed habitat 10-50% and in 1-3 patches	points = 2	Ū
Undisturbed habitat 10-50% and > 3 patches	points = 1	
Undisturbed habitat < 10% of 1 km Polygon	points = 0	
H 2.3. Land use intensity in 1 km Polygon: If		
> 50% of 1 km Polygon is high intensity land use	points = (- 2)	-2
≤ 50% of 1 km Polygon is high intensity	points = 0

Wetland Rating System for Western WA: 2014 Update Rating Form – Effective January 1, 2015

WDFW Priority Habitats

<u>Priority habitats listed by WDFW</u> (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp. <u>http://wdfw.wa.gov/publications/00165/wdfw00165.pdf</u> or access the list from here: <u>http://wdfw.wa.gov/conservation/phs/list/</u>)

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** This question is independent of the land use between the wetland unit and the priority habitat.

□ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).

□ **Biodiversity Areas and Corridors**: Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).

□ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.

 \Box **Old-growth/Mature forests:** <u>Old-growth west of Cascade crest</u> – Stands of at least 2 tree species, forming a multi- layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. <u>Mature forests</u> – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.

□ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).

□ **Riparian**: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.

□ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).

□ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.

□ **Nearshore**: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).

□ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.

□ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.

□ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.

 \Box Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type Cat	ategory
Check off any criteria that apply to the wetland. Circle the category when the appropriate criteria are met.	
SC 1.0. Estuarine wetlands	
Does the wetland meet the following criteria for Estuarine wetlands?	
□ The dominant water regime is tidal,	
□ Vegetated, and □ With a solicity greater than 0.5 ppt	
□ With a salinity greater than 0.5 ppt □ Yes –Go to SC 1.1 □ No= Not an estuarine wetland SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area	
	Cat. I
□ Yes = Category I □ No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions?	Cat. I
	Cal. I
less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25)	
un- mowed grassland.	Cat. II
The wetland has at least two of the following features: tidal channels, depressions with open water,	
or contiguous freshwater wetlands.	
SC 2.0. Wetlands of High Conservation Value (WHCV)	
SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High	
Conservation Value? \Box Yes – Go to SC 2.2 \Box No – Go to SC 2.3	
SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value?	
SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland?	Cat. I
http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf	
□Yes – Contact WNHP/WDNR and go to SC 2.4 □No = Not a WHCV	
SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on	
their website?	
SC 3.0. Bogs	
Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? Use the key	
<i>below.</i> If you answer YES you will still need to rate the wetland based on its functions. SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or	
more of the first 32 in of the soil profile? \Box Yes – Go to SC 3.3 \Box No – Go to SC 3.2	
SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep	
over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or	
pond? \Box Yes – Go to SC 3.3 \Box No = Is not a bog	
SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30%	Cat. I
cover of plant species listed in Table 4? \Box Yes = Is a Category I bog \Box No – Go to SC 3.4	
NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by	
measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the	
plant species in Table 4 are present, the wetland is a bog.	
SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar,	
western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy?	
Species (or combination of species) isted in Table 4 provide more than 30% of the cover under the callopy: \Box Yes = Is a Category I bog \Box No = Is not a bog	

SC 4.0. Forested Wetlands	
 Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more. Mature forests (west of the Cascade Crest): Stands where the largest trees are 80- 200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm). 	Cat. I
□Yes = Category I □No = Not a forested wetland for this section	
SC 5.0. Wetlands in Coastal Lagoons	
Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?	
The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks	
□ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5	
ppt) during most of the year in at least a portion of the lagoon (needs to be measured near the	Cat. I
<i>bottom)</i>	
SC 5.1. Does the wetland meet all of the following three conditions?	
□ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has	Cat. II
less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).	
\Box At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or	
un- mowed grassland.	
\Box The wetland is larger than $1/_{10}$ ac (4350 ft ²)	
□Yes = Category I □No = Category II	
SC 6.0. Interdunal Wetlands	
Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? If	
you answer yes you will still need to rate the wetland based on its habitat functions.	Cat I
In practical terms that means the following geographic areas:	
Long Beach Peninsula: Lands west of SR 103	
Grayland-Westport: Lands west of SR 105	
Ocean Shores-Copalis: Lands west of SR 115 and SR 109 Yes – Go to SC 6.1 No = not an interdunal wetland for rating	Cat. II
SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M	
for the three aspects of function)? \Box Yes = Category I \Box No – Go to SC 6.2	Cat. III
SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?	
□Yes = Category II □No – Go to SC 6.3	Cat. IV
SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?	Cat. IV
□Yes = Category III □No = Category IV	
Catagory of watland based on Special Characteristics	
Category of wetland based on Special Characteristics If you answered No for all types, enter "Not Applicable" on Summary Form	Click here to
in you answered no for an types, enter not Applicable on Summary Form	enter text.
