

WELCOME to the first of two open houses for the Harvey Field Airport Master Plan. The open houses are intended to be informative sessions for the community regarding the planned future of your airport.

1 STATION ONE: OVERVIEW & OUTREACH

This station provides a brief description of the overall Master Plan process, airport overview, economic impact, and the importance of public outreach and involvement of the Planning Advisory Committee (PAC).

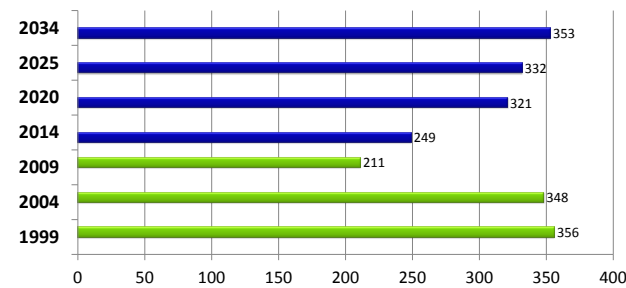

The Master Plan was kicked off in fall 2014 and we are currently wrapping up the investigation phase.

2 STATION TWO: AVIATION FORECAST

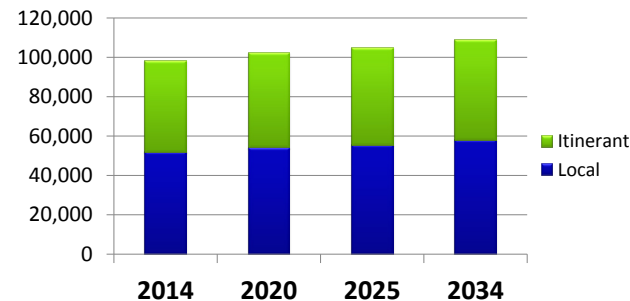

This station presents an overview of the Forecast Analysis including why forecasts are prepared and factors influencing activity at Harvey Field. Based aircraft, during the 20 year forecast period, are projected at an average annual growth rate of 2.1%. This projected growth is below the 1999 peak of 356 based aircraft.

Based Aircraft Forecast

Operations are predicted to grow at less than 1% annually as shown below.

Operations Forecast

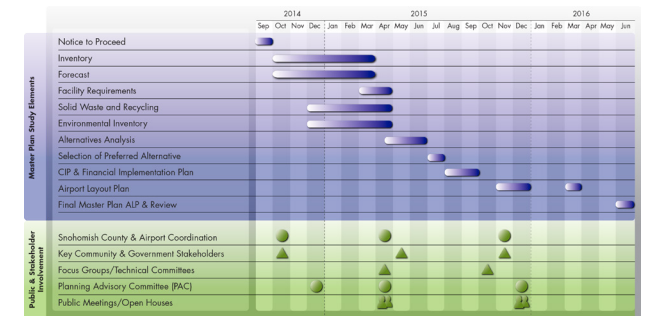

3 STATION THREE: INVENTORY & FACILITY REQUIREMENTS

A detailed inventory of existing airport facilities was collected as the initial step in the investigation phase. Following the completion of the aviation activity forecast, an analysis of the existing facilities was done to determine if they met the existing and projected demand, what facilities may need improvement or expansion, and what new facilities may be necessary. This station illustrates these needs. It is important to note that the next phase, solutions, will determine alternatives to meet these needs.

4 STATION FOUR: SCHEDULE AND NEXT STEPS

The next steps of the Master Plan are critical to determining a future for Harvey Field that meets the needs and safety of airport users while remaining a good neighbor.

Thank you for your participation! Questions and comments are encouraged.
